

THE GOVERNANCE VISIBILITY GAP

Most restaurant groups do not have a food cost problem alone. They have a **governance visibility problem**.

Traditional ERP and inventory systems reconcile invoices and gross weights, but they do not govern the operational variance that happens between receiving, fabrication, prep, and service.

At scale, small yield discrepancies become material EBITDA exposure.

3.5% UNMONITORED YIELD DRIFT	\$1.75M ANNUAL MARGIN EXPOSURE
50 UNIT HIGH-VOLUME NETWORK	BLIND SPOT P&L STATUS

* Model based on illustrative 50-unit high-volume steakhouse network processing \$50M in annual protein spend.

14-DAY VALIDATION PROTOCOL

Designed for immediate execution with zero disruption to existing tech stacks.

- **PHASE 1: TARGETING** DAYS 0-1
Select 2 high-volume flagship units. Define protein categories, baseline reports, receiving workflow, and operational owners.
- **PHASE 2: BASELINE AUDIT** DAYS 2-8
Run shadow audit parallel to existing systems. Measure actual yield variance, receiving discrepancies, trim loss, and inventory drift.
- **PHASE 3: GOVERNANCE ACTIVATION** DAYS 9-14
Activate variance thresholds, compliance checkpoints, and manager escalation workflow. Document leakage patterns and recovery opportunities.

WHAT BRASA MEASURES

RECEIVING Invoice Weight vs. Actual Receiving Weight	GOVERNANCE Out-of-Spec Product Flags	YIELD Primal Yield Variance
INVENTORY Trim & Fabrication Waste	SERVICE Lbs / Guest Drift	FINANCE Store-Level Variance Escalation

PILOT SUCCESS CRITERIA

- Top 3 operational leakage points identified
- Baseline variance profile established
- Receiving compliance score calculated
- Store-level escalation workflow validated
- Margin recovery opportunity quantified
- Executive summary delivered within 48 hours

EXECUTIVE DELIVERABLES

- Pilot Summary Brief
- Variance Exposure Report
- Store-Level Risk Matrix
- Receiving Compliance Findings
- Yield Governance Recommendations
- Rollout Readiness Assessment
