

BRASA Enterprise

OPERATIONAL GOVERNANCE INFRASTRUCTURE

"Most organizations can reconcile invoices perfectly while still losing margin operationally every day."

THE GOVERNANCE VISIBILITY PROBLEM

Traditional ERPs are designed for accounting, not for biological reality. They track gross weights perfectly, but are blind to the systemic yield variance, fabrication waste, and receiving discrepancies that happen between the dock and the plate.

The P&L looks healthy at a single-unit level until scale amplifies the leakage. When a network scales, a seemingly insignificant yield drift equates to millions of dollars in unaccounted capital bleed. **That operational drift compounds materially.**

FINANCIAL EXPOSURE PROFILE

Baseline metric for a 50-unit high-volume steakhouse network processing \$50M in annual protein.

UNMONITORED YIELD
LOSS

3.5%

ANNUAL MARGIN
LEAKAGE

\$1.75M

EXECUTIVE VISIBILITY

BLIND SPOT

DESIGNED AROUND:

- Multi-unit premium steakhouse operations
- Yield governance workflows
- High-volume receiving environments
- Enterprise operational compliance

THE GOVERNANCE LAYER

FIG 1: ENTERPRISE GOVERNANCE CONSOLE - REAL-TIME ANOMALY DETECTION

The BRASA Enterprise Governance Console is an **operational intelligence layer** that sits on top of your existing POS and Supply Chain stack, turning biological variance into actionable accountability.

WORKFLOW & COMPLIANCE

FIG 2: FRICTIONLESS DOCK RECEIVING EXECUTION

- **Deterministic Inbound Governance:** Real-time reconciliation of invoice weight vs. actual receiving weight. Immediate flagging of out-of-spec products at the dock.
- **Primal Yield Variance Tracking:** Real-time audit of butcher yield variance by primal cut. Eliminates unaccounted loss and ensures 100% accountability.
- **Operational Variance Lockout:** Enforces compliance directly into daily workflows. Managers cannot close daily audits if yield variance exceeds thresholds.

IMPLEMENTABLE EXECUTION

Enterprise buyers require reduction of operational friction, not just intelligence. BRASA Enterprise deploys with **zero disruption** to your existing tech stack. We run parallel to your ERP, enforcing compliance without slowing down the kitchen.

THE 14-DAY PILOT PROTOCOL

PHASE 1: TARGETING

Select 2 high-volume flagship units for rapid deployment.

PHASE 2: BASELINE

A 7-day shadow audit to establish the actual biological yield variance.

PHASE 3: GOVERNANCE

A 7-day active lockout protocol implementation to enforce compliance.

OPERATIONAL OUTCOMES

- Immediate identification of top 3 leakage points across the network.
- Establishment of a strict governance baseline for scalable margin recovery.
- **Potential margin recovery opportunities identified through governance enforcement and variance visibility.**

BRASA Enterprise was designed to operationalize accountability at scale.
